

3ft Ridge & Accessories

Our 3 foot ridge system is a one piece hand made durable alternative to the common 18 inch format.

It lends itself well to areas with high wind velocities where its extra weight ensures a good fixing. With the stone effect its a perfect finish for older stone constructed buildings such as converted barns, and will compliment any roof of slate or stone slate, natural or otherwise. A variety of other colours are available in a range of profiles to use in conjunction with our matching ventilation accessories.
